

1. What is a program?

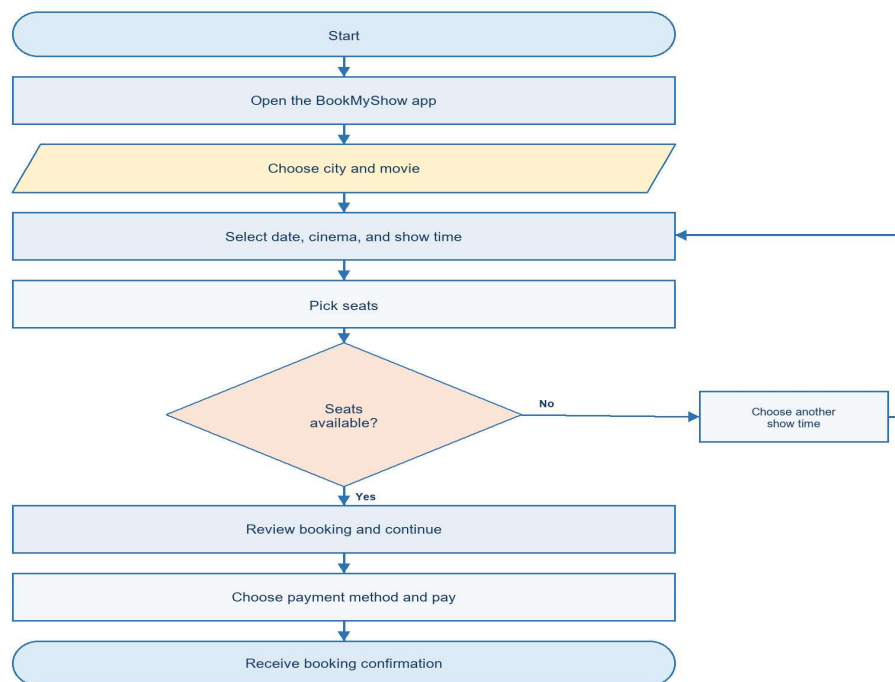

A **program** is a set of instructions written for a computer or phone to follow so that it can perform a useful task. For example, when I use Paytm to send money, the program checks the amount, processes the payment securely, and shows a success message to both people.

2. Popular programming languages

Language	Usually used as	Simple note
Java	Compiled	Java code is compiled into bytecode, then run by the Java Virtual Machine.
Python	Interpreted	Python code is commonly run by an interpreter.
JavaScript	Can be both	Browsers interpret/JIT-compile it; tools can also compile it for other uses.
