

Task 1 : Write the Git command for each: initialize a repo, stage all files, commit with a message, push to remote, pull latest changes.

Git Commands :-

- 1. Initialize a repository**
git init
 - 2. Stage all files**
git add .
 - 3. Commit with a message**
git commit -m "Message"
 - 4. Push to remote repository**
git push -u origin main
 - 5. Pull latest changes.**
git pull origin main
-

Task 2 : What is the difference between git fetch and git pull? Answer in 2 lines

git fetch

downloads the latest changes from the remote repository but does not merge them into the current branch.

git pull

downloads the latest changes and automatically merges them into the current branch.

Task 3 : Create a new GitHub repository, push any small text file from your local system, and share the repo link.

Link : <https://github.com/Anuragx84/Codes.git>

Task 4 : What is the difference between a Fork and a Pull Request? Answer in 2 lines.

Fork: Creates a personal copy of someone else's GitHub repository in your own GitHub account.

Pull Request: A request to the original repository owner to review and merge your changes into their repository.

Task 5 : Create a new branch named feature-test, make one commit on it, and merge it back to the main branch. Write the commands you used.

commands used :

```
git checkout main
```

```
git branch feature-test
```

```
git checkout feature-test
```

```
git add .
```

```
git commit -m "Added feature-test changes"
```

```
git checkout main
```

```
git merge feature-test
```
