

Task 1 : What are the three main layers of software architecture? Write one line about each.

1. **Presentation Layer** – Handles the user interface and displays information to the user.
2. **Business Logic Layer** – Contains the main rules, calculations, and logic of the application.
3. **Data Layer** – Handles storing, retrieving, and managing data in the database.

Task 2 : Define client and server in your own words with one real-life example.

- **Client:** A device or application that requests a service or information from a server.
- **Server:** A computer or system that receives requests from clients and provides the required data or service.

Real-life example: When you open YouTube on your phone, your phone acts as the **client**, while YouTube's servers provide the videos and other data.

Task 3 : Write 2 differences each between desktop apps, web apps, and mobile apps.

Type	Difference 1	Difference 2
Desktop App	Installed directly on a computer.	Usually designed for Windows, macOS, or Linux.
Web App	Runs through a web browser.	Usually does not require installation on the device.
Mobile App	Designed mainly for smartphones/tablets.	Can use mobile features such as GPS, camera, and notifications.

Task 4 : Name any 3 databases and mention whether each is SQL or NoSQL

Database	Type
MySQL	SQL
PostgreSQL	SQL
MongoDB	NoSQL
