

5. Draw a simple memory diagram (on paper or using any drawing tool) showing how a pointer references the address of a variable, using the variables from your likes and ptrLikes example; label the variable, pointer, and address.

```
Int likes = 250;
```

```
Int *ptrLikes = &likes;
```

ptrLikes stores the address of likes
 &likes = address of likes
*ptrLikes = value stored at that address = 250
